

1. The Math 22 team has an idea to raise funds for next year. We are going to buy 8-inch by 8-inch gold sheets, and we will cut and rearrange the sheet as shown in the figures below. We will then sell the resulting 5-inch by 13-inch sheet (with the same thickness). Please analyze our plan.

2. Suppose instead we take 8 in by 21 in sheets and rearrange them to 13 by 13 sheets with the following cuts:

3. How could we rearrange a 21 by 21 square to get an “extra square”?
4. What about larger squares?
